

## FORMER FUEL DEPOT

### CLIENT:

Major Building Contractor

### SITE:

Liverpool Community College

### CONTRACT:

Decommission and removal of former below ground fuel storage tanks and removal of contaminated soils.

## SCOPE OF WORKS

Following detailed discussions with the client, local authority and petroleum licensing officer, Green Remediation designed and implemented a scope of works, which included:

- Careful delineation of fuel tanks;
- Investigation of tank contents and removal where required;
- Removal of and cutting up of tanks;
- Excavation and removal of associated tank cradle structure;
- Excavation and removal of contaminated soils and backfilling of resultant void.
- Validation testing of the resultant excavation

## PROJECT MANAGEMENT

As part of our service we provided a comprehensive project management service to the client, which included:

- Supervision by Green Remediation staff (qualified SPA Passport Holders) during removal of fuel tanks;
- Preparation of Health and Safety documentation;
- Liaison with regulators; and
- Production of a final report on the works undertaken.
